

CLAIM AMENDMENTS:

Please amend the claims as follows:

1. (Currently amended) A TWAIN (Tool Without An Interesting Name) network image transmission system, comprising:
 - a versatile business machine as a server site, including:
 - an image acquisition module, used to retrieve image data;
 - a data storage module, storing the image data and obtaining an image data hyperlink address to generate an image data hyperlink embedded hypertext;
 - a server site TWAIN information management program, receiving an image data retrieving command to transmit the image data hyperlink embedded hypertext; and
 - a first communication interface with hypertext transmission protocol, transmitting the image data hyperlink embedded ~~document~~ hypertext;
 - a host, receiving the image data, the host including:
 - a user-site TWAIN data management program, sending the image data retrieving command to the server-site TWAIN data management program, and receiving and displaying the image data hyperlink hypertext;
 - a second communication interface with hypertext transport protocol, transmitting the image data hyperlink embedded hypertext to the user-site TWAIN data management program;
 - and

AMENDMENT

10/618,677

a network, linking the first communication interface of the versatile business machine to the second communication interface of the host.

2. (Original) The system of claim 1, wherein the image acquisition module retrieves the image data by scanning.

3. (Original) The system of claim 1, wherein the user-site TWAIN data management program is a data management program with browsing function.

4-7. (Cancelled)
